Date - 22/05/20

Class - 8

Topic:- Synthetic fibres
and Plastics.

Teacher:- M. Rajeem

Mobile:- 9554404852

- # The waste created by plastics is not environment friendly.
- # on burning plastics release poisonous gases.
- # on dumping in the ground they may take years to degenerate. This is because of their non biodegradable nature.
- # We need to use synthetic fibres and plastics in such a manner that we can enjoy their good qualities and at the same time minimise the environmental hazards for the living communities.

Effect of Plastics on Environment:-

Natural materials like wood and paper are biodegradable. In contrast, most plastics do not decay therefore, they are non-biodegradable. The lightweight nature of plastics can also be a problem. Burning of plastics also release poisonous fumes into the atmosphere. This way plastics pollute the environment.

Q (1) :- Write a note on disadvantage of Plastic.

Q (2) What are advantages of Plastics?
